European sizes, commonly known as EU sizes, are generally based on the length of the foot in centimeters, while American sizes, both US mens and womens, often factor in the length and width of the foot. Additionally, while the US has separate sizing scales for men and women, European sizes are usually unisex, meaning men and women are the same size. Either way, its essential to consult a shoe size conversion chart when shopping internationally.Are there significant differences between mens and womens shoe sizes?Yes, there are notable differences between mens and womens shoe sizes. Typically, mens shoes are broader and larger than womens shoes for the same foot length. Even each brand has different ways of measuring and is apparent in brands like Adidas, where the mens to womens shoe size adidas conversion might not be a straightforward numerical difference. Always ensure youre looking at the correct gender-specific size chart when shopping, especially when converting between regions like US, UK, and EU.How do I convert my US shoe size to a UK or European size?Converting your US American shoe size to UK or European sizes can be a bit tricky due to the unique sizing systems each region uses. For example, to convert a mens size 11 US to UK, youd subtract .5 to get 10.5UK. To get Euro size, you generally add 33 or 34 to get 45. While the US system is based on inches, the UK system is similar but uses different starting points for men and women. The European system, on the other hand, generally uses centimeters. To ensure a perfect fit, its advisable to refer to a shoe size conversion chart or use a shoe size converter tool, which provides accurate conversions based on your foots length and width.Why is it important to consider shoe width when shopping?Shoe width is as crucial as shoe length when ensuring a comfortable fit. Shoes that are too narrow or too wide can lead to foot discomfort, blisters, and other issues. Standard shoe width is often denoted by the letter D, but there are other shoe widths available to accommodate various foot shapes. Its always a good idea to know both your shoe length and width when shopping, especially if youre buying from international brands or looking at European vs. American shoe sizes.How can I determine my childs shoe size as they grow?Childrens feet grow rapidly, making it essential to regularly check their shoe size. A useful tool for this is the infant shoe size chart by age, which provides approximate sizes based on a childs age. However, as kids grow at different rates, its always best to measure their feet directly using tools like the cm to shoe size conversion chart. Remember, a well-fitting shoe is crucial for a childs foot development and overall comfort.What should I keep in mind when buying shoes from international brands?When buying shoes from international brands, its essential to be aware of sizing differences. Every region, be it US, UK, or EU, has its unique sizing chart. For instance, a size 5 in US shoes might not be the same in European or UK sizes. Brands like Nike or Adidas might also have their specific shoe size charts. Always consult the brands shoe size guide or an international shoe size chart before making a purchase to ensure the best fit. Like our conversions? Sharing our link helps us to grow! Venturing into the vast domain of shoe sizes, with its diverse international sizing conventions, can sometimes incredibly frustrating! With sizes varying from one country to another, understanding the specifics can get tricky. Weve been there you jump from site to site, shoe chart to chart just to find that nothing is the same! You can save a lot of money, and you might find the cutes shoes. But be sure to get the right size! We help you convert UK to EU shoe size in our conversion chart below. Please note: some shoe brands might have slight variations from this women's shoe size conversion chart, but it will work with most brands. UK shoe size is used in the United Kingdom (England, Scotland, Wales and Northern Ireland) EU shoe size is sometimes referred to as EUR shoe size. It is used in most of Europe, excluding United Kingdom. This means EU shoe size is used in France, Germany, Italy, Spain, Portugal, The Netherlands, Russia, Poland, Belgium, Turkey, Denmark, Sweden, Norway, Finland, Austria, Czech Republic, Hungary, Slovakia, Slovenia, Croatia, Bosnia, Serbia, Ukraine, Belarus, Latvia, Lithuania and Estonia. Shoe size conversion between European, United States, United Kingdom, Canadian, Mexican, Australian, Brazilian, and Japanese shoe size charts. Foot size conversion from inches, centimeters, and MondoPoint (millimeters) to any sizing chart. Also convert men's to women's sizes and vice versa. Quick navigation: This versatile converter can be used to convert shoe sizes in all kinds of international standards. It can help you determine what your shoe size is in a variety of shoe sizing systems. Since some standards have different sizes for men's, women's, and children's shoes, you need to specify what type of shoe size it is. The supported standards include: European (Euro, EU) United States (US, USA) Canada (CA) Mexico (MX) Australia (AUS) Japan (JP) Brazil (BR) Centimeters (cm) Inches (in) MondoPoint (mm) To use the tool, first select if the input size is for a men's, women's, or children's shoes, then choose the input sizing system and select the size to convert from. Then choose the desired output size standard. The result will be displayed automatically. For example, to convert 43 Euro size to US size for a woman's shoe, select "Woman's", then "Europe" and choose "43" from the drop down. Finally, select "US" from the drop down below. Likewise, EU 39 shoe size is 8.5 in US for women and 7 US for men. The converter is much easier and faster to use than a conversion chart. Women's to men's and men's to women's size conversions Converting men's to women's or women's to men's size conversion is easy if one of the systems is EU, Mexican, Japanese, Brazilian, or cm, in, or MondoPoint (mm). Simply select the target shoe type, and then perform the conversion. E.g. to convert a European shoe size of 42 to a US women's shoe size, select "Women's", choose "European", select "42" and choose "US" as the output size to get the result (10 US). However, conversion between men's and woman's and vice versa needs to be done in two steps if it is one of UK to US, US to UK, AUS to UK, UK to AUS, AUS to US, US to AUS, JP to US, US to JP, JP to UK, UK to JP, JP to AUS, AUS to JP. For, example, if you are a man with narrower feet you might want to to convert a men's shoe with a UK size of 7 to a US women's shoe size. On the first step, select "Men's", then choose UK size 7, and select "MondoPoint" as the output metric. The result will be 254 MondoPoint, or 254 millimeters. Then, select "Women's", choose MondoPoint and enter 254. For the output metric choose "US" to get the result: US size 9 (Women's). Shoe size conversion chart While using the converter is typically easier and faster for most users, for your convenience, a comprehensive conversion table for adult shoe sizes is presented below. It can also be used to convert women's to men's and men's to women's shoe sizes. Shoe size conversion table Sizing System Europe (EU) USA & CA, Men's USA & CA, Women's UK, Men's UK, Women's Mexico Australia, Men's Australia, Women's Japan, Men's Japan, Women's Brazil Inches (in) Centimeters (cm) MondoPoint (mm) Sizes 35 35.5 36 37 37.5 38 38.5 39 40 41 42 43 44 45 46.5 48.5 3.5 4 4.5 5 5.5 6 6.5 7 7.5 8 8.5 9 10.5 11.5 12.5 14 5 5.5 6 6.5 7 7.5 8 8.5 9 9.5 10 10.5 12 13 14 15.5 3 3.5 4 4.5 5 5.5 6 6.5 7 7.5 8 8.5 10 11 12 13.5 2.5 3 3.5 4 4.5 5 5.5 6 6.5 7 7.5 8 9.5 10.5 11.5 13 N/A N/A N/A N/A N/A N/A 4.5 5 5.5 6 6.5 7 7.5 9 10 11 12.5 3 3.5 4 4.5 5 5.5 6 6.5 7 7.5 8 8.5 10 11 12 13.5 5 5.5 6 6.5 7 7.5 8 8.5 9 9.5 10 10.5 12 13 14 15.5 21.5 22 22.5 23 23.5 24 24.5 25 25.5 26 26.5 27.5 28.5 29.5 30.5 31.5 21 21.5 22 22.5 23 23.5 24 24.5 25 25.5 26 27 28 29 30 31 33 33 34 35 35 36 36 37 38 39 40 41 42 43 44 46 9 9.1 9.4 9.4 9.5 9.6 9.8 9.9 10 10.1 10.3 10.5 10.8 11 11.8 11.5 22.8 23.1 23.5 23.8 24.1 24.5 24.8 25.1 25.4 25.7 26 26.7 27.3 27.9 28.6 29.2 228 231 235 238 241 245 248 251 254 257 260 267 273 279 286 292 To use the chart to convert a Men's shoe size 6 US to European size, simply look up "12" on the row labeled "USA & Canada, Men's", then look up to the cell value in the same column on the row labeled "Europe (EU)" which is size 44. Should you need a printable chart for a quick reference when you may not necessarily be online, the above table should be sufficient. Since it is easy to measure one's foot length in inches or centimeters, converting that measurement to a shoe size is a typical task for which a shoe size converter may be used. First, take your measurement correctly as described below. Select if it is a men's or women's or children's shoe, then select 'Centimeters' or 'Inches' depending on what unit you measured the foot length in, and finally select the desired sizing system to see the corresponding shoe size. For an example of cm to shoe size conversion, say a woman's foot measured 25.1 centimeters, then using the converter one can determine that the corresponding shoe size is 6 UK, 8.5 US, and 5.5 in Mexican units. The length of a person's foot is the distance between two parallel lines that are perpendicular to the foot and in contact with the most prominent toe and the most prominent part of the heel. To measure your foot, stand barefoot, distribute your body weight equally between both feet and have someone put two straight objects - one behind your heel and one in front of your lengthiest toe. Then use a measurement tape or ruler to measure the distance between the two. With the measurement taken, use a foot size conversion chart or a tool like ours to estimate the corresponding shoe size. 1 "ISO/TS 19407:2015, - Footwear -- Sizing -- Conversion of sizing systems" 2 "ISO 9407:2019, Shoe sizes Mondopoint system of sizing and marking" We have put together a handy shoe size converter to use for women's shoes, men's shoes and children's shoes across countries. It works for the following countries and regions:United States and CanadaUnited KingdomEuropeAustraliaThe shoe size converter is easy to use. Select the country or region you are converting from and then the one you are converting to. After that, let our calculator know whether you are working with men's, kids or women's shoes. After this, select the relevant size and simply press "Convert". We will do all the work for you and show the correct shoe size in your chosen region.We can buy shoes over the internet, or when on holiday from different zones. The shoe size calculator lets you select the right ones every time. Never buy the wrong shoe size again.Shoe Size Conversion CalculatorThere are different foot measurements in different markets. This shows the length of the shoes, while most widths are the same because it would cost too much to make them in a variety of widths. Starting at size zero or one, different parts of the world use different measures, so you don't always know what might work best for you.Over the years, there have been two popular measurement systems:1. The Barleycorn2. The Paris PointAlthough these have been around for some time, most people don't know anything about them. The Paris Point is European and works on sizes increasing by 2/3 or a centimeter at a time. The Barleycorn is used in the UK and United States and sizes increase by 1/3 of an inch every time.Internationally, shoe size charts are based on what is known as the Brannock system. This is used in Canada, Australia, the States and New Zealand. With this system, 2 barleycorns are added for each new shoe size. But men's shoes, women's shoes and children's shoes can all have a different zero point in this system.It would be easier if the whole world used the same shoe sizing, but that's just not the case. It isn't easy to correctly identify a shoe size across different markets. The only commonality is the fact that the length of the shoes is the determining factor. Use our converter to get accurate shoe sizes in different markets across the world. You can use a chart to measure.You should measure from the back of the heel to the tip of the longest toes, which is usually the big toe. This should be measured without shoes, socks or any other footwear garment being worn. Stand with your weight distributed evenly across your body and then measure. It isn't uncommon for feet to be slightly different sizes, so don't worry if this is the case. Just use the biggest size when buying footwear.Some systems do also include the width, particularly for children. They may be assessed in millimeters and the shoes sizes may have a letter after the size:W for WideR for RegularM for MediumN for NarrowWhen buying shoes in or from a part of the world that you are not familiar with, the problem you have is the lack of a standard sizing system. Also, there are shoe makers that make things always a little smaller or bigger. It can make buying shoes a pain. They can ease the pressure on wider feet by changing their dimensions slightly. You will learn this as you buy from a new manufacturer. We recommend that you try on a few sizes to see what works best for you before buying if at all possible.Men's Shoe Size Conversion ChartUS & CA SizesUK SizesEU SizesAU SizesInchesCM65.5395.59.25"23.56.563969.5"24.176.5406.59.625"24.47.5740-4179.75"24.887.5417.59.9375"25.48.5841-42810.125"25.798.5428.510.25"269.5942-43910.4375"26.7109.5439.510.5625"2710.51043-441010.75"27.31110.54410.510.9375"27.911.51144-451111.125"28.31211.54511.511.25"28.61312.54612.511.5625"29.41413.54713.511.875"30.21514.54814.512.1875"311615.54915.512.5"31.8Women's Shoe Size Conversion ChartUS & CA SizesUK SizesEU SizesAU SizesInchesCM423548.1875"20.84.52.5354.58.375"21.35335-3658.5"21.65.53.5365.58.75"22.26436-3768.875"22.56.54.5376.59.0625"237537-3879.25"23.57.55.5387.59.375"23.88638-3989.5"24.18.56.5398.59.6875"24.69739-4099.875"25.19.57.5409.510"25.410840-411010.1875"25.910.58.54110.510.3125"26.211941-421110.5"26.711.59.54211.510.6875"27.1121042-431210.875"27.6Youth Shoe Size Conversion ChartUS & CA SizesUK SizesEU SizesAU SizesInchesCM12.511.53011.57.25"18.4131231127.5"19.113.512.53112.57.625"19.411332137.75"19.71.51433148"20.3213318.125"20.62.51.5341.58.25"21323428.5"21.63.52.5352.58.625"21.9433638.75"22.24.53.5363.59"22.9543749.125"23.25.54.5374.59.25"23.5653859.5"24.16.55.5385.59.625"24.4763969.75"24.8Kids' Shoe Size Conversion ChartUS & CA SizesUK SizesEU SizesAU SizesInchesCM5.54.5214.55"12.7652255.125"136.55.5225.55.25"13.3762365.5"147.56.5236.55.625"14.3872475.75"14.68.57.5257.56"15.2982586.125"15.69.58.5268.56.25"15.91092796.5"16.510.59.5279.56.625"16.8111028106.75"17.111.510.52910.57"17.8121130117.125"18.1Infant Shoe Size Conversion ChartUS & CA SizesUK SizesEU SizesAU SizesInchesCM0.501603.25"8.310.5160.53.5"8.91.511713.625"9.2211713.75"9.52.51.5181.54"10.2321824.125"10.53.52.5192.54.25"10.8431934.5"11.44.53.5203.54.625"11.7542044.75"12.1US & CA = United States & Canada, UK = United Kingdom, EU = Europe, AU = AustraliaYou may also be interested in our Bra Size Conversion Calculator Are you shopping for shoes on the Internet? Cool! That is great fun, and you can search the whole World for shoes. But be aware of different shoe sizing systems. Sizing does vary slightly per manufacturer because each vendor uses their own set of lasts when creating the shoes, so these shoe size comparison charts are only estimates.Shoe Size Selection TipsAlways try to find online reviews of the pair you want to buy, from real people who have actually purchased the product. Best places to look for real reviews are amazon.com and YouTube.Measure your feet in the evening hours because feet expand throughout the day.If you're buying shoes for a first time walker, then be sure to purchase a pair with flexible soles and a small amount of extra growing space. When shoes are too big, blisters are likely to form while a tight fitting shoe will chafe your little one's feet and cause redness.If you're buying shoes for your child, take into account that footwear for children usually lasts for about four to five months. Therefore, create a household budget that includes enough funds to pay for several pairs of shoes.To find the most comfortable footwear for you, consider buying shoes for both the width and the length of your feet. Some people need to purchase shoes that are narrow because they are never comfortable on wide one, or the opposite. You may even need to buy shoes that are especially slim or extra wide.If you start with a known fact, there is a better chance of heading in the right direction.Remember that laced shoes give a little more leeway than slip-on shows. Some adjustments can be made by the thickness of the socks you wear. Those not wearing socks, are probably buying sandals, which do not always fit perfectly.Furthermore, keep in mind the shoes that are slightly large can be adjusted through the thickness of the socks, or for ladies wearing flats or pumps, there is a liner that can be purchased to help the shoe fit better.If a lot of walking is going to be involved, go beyond the size that is a little greater. Your foot is going to swell during the day, and the larger shoe will be more comfortable. You do not want it too large. The constant rubbing will cause blisters. Also, the shoes cannot be too large, because they would be very loose in the morning hours.When buying footwear online, take into consideration the type of activities you'll be performing in the shoes. Hiking shoes should be durable and waterproof. They should also cover your ankles to provide protection from snake and bug bites as well as rocks and plants. If you are buying regular workout shoes, then make sure that they come with a cushioning insert to protect your feet and legs from the activity. Dress shoes should feature a thick sole and quality construction.Shopping Online And The Risks Involved When Choosing The SizeShopping from a catalog or an online store has always carried a minor concern of uncertainty, which can offset by the increased selection and usually lower price.Therefore, if buying online is the way you want to go, let us be the first and possibly last stop. With all the charts from all the countries and manufacturers making the shoes at your disposal, your task becomes easier. You need a starting point, like men's loafers size 9, or women's heels, size 5, double A.Then you find the pair you want to buy. With your size information in your hand and the wealth of information from this site, and with a little luck, you should be able to find some way to make the comparison between what is being sold and what you need. This will ultimately allow you to make the right choice.Finally, many people, of both sexes, like to exaggerate about the size shoes they wear. Large men will wear big shoes. Allegedly, women will often claim to wear a shoe smaller than their shoe size, or that is what Hollywood would have us believe. The key is to be truthful.In the movie "Steel Magnolias", Dolly Parton runs a beauty shop and the subject of shoes came up. She says something to the effect that she wears a size six, but because a size seven are so comfortable, she buys a size eight. The numbers may be off, but as we all know, show sizes can vary, and we do not know where the shoes she allegedly purchased were from a country where a size 6 may equal a size 8.Do your homework ahead of time.Be honest with yourself and always remember, shoes, which are a little loose are usually more comfortable than those that feel a little tight. So when picking a size from among the charts study the variances among the countries and the shoe manufacturers and make your best choice.Affiliate Links - Advertising DisclosureIf you purchase a product or service linked from this site, we may receive an "affiliate commission".
