Last updated: December 3, 2019 Google Fusion Tables and the Fusion Tables API have been discontinued. We want to thank all our users these past nine years. We understand you may not agree with this decision, but we hope you'll find alternatives that are just as useful, including BigQuery, Cloud SQL, Maps Platform, and Data Studio. Frequently Asked Questions What will happen to my Google Fusion Tables data? All Google Fusion Tables data (eg. data you uploaded to tables) will be systematically deleted from Google servers. Will there be any way to retrieve my Fusion Tables data from Google in the future? You'll be able to download your table data via Google Takeout until March 3, 2020. After that, all Fusion Tables data will be permanently and irrevocably deleted. Why was Google Fusion Tables discontinued? Please refer to our blog post for more information. See a bug? Let us know! Here you can also share your thoughts and ideas about updates to LiveJournal Your request has been filed. You can track the progress of your request at: If you have any other questions or comments, you can add them to that request at any time. Send another report Close feedback form Edit Mods extend the Pixel Dungeon source code to add additional features or tweaks. This page lists most of the available mods: The first 4 tables list mods that are fully functional and contribute something original to the source material they use. Most of them are available in English, and many also in other languages of Europe and America. The 5th table lists mods using mostly Asian languages. They are only partially, or not translated to English at all, and a considerable amount of the game messages show up as errors or display the game's original language. This division-arrangement takes only into account the languages mostly used by the wiki's audience, and has no other purpose. Readers interested in the other languages that are available for playing Original PD or some of it this wiki page. Moreover, desktop pc users that are looking only for variants playable in their device without the need of an emulator should better visit this category page. The 6th table lists broken, hacked, clone/impostor or illegitimate mods and mods with game messages difficult to understand because of their flawed format, mostly for documentation reasons. Pixel Dungeon has over 150 mods; 25+ of them currently in active development, and 40+ of them with source code available. 10 of these mods are simply clones of original Pixel Dungeon or other mods. If you follow the links to the mods' main pages, in their infobox you will often see the ordinal number of their first release in comparison to the other mods. Moreover, this number will be displayed in a different color, according to the current state of the mod: Green → actively developed Light Blue → completed Red → abandoned Yellow → on hiatus Readers who are interested in more details about the definition of modding, or about the general characteristics of the Pixel Dungeon mods' ecosystem can also visit the page about mods' general features of the wiki. There is also a page

Used to be a resource for readers wanting to communicate with a specific developer, but also serves as an explicit acknowledgment of their contributions by the wiki. Most readers are interested in specific Pixel Dungeon versions (for example mods of Shattered PD that implement 2.5D graphics) might find useful this page about the generations of Pixel Dungeon mods. Notes: The tables' lists are sorted alphabetically by default, but readers can click on the arrow inside the "Last Update" box, to rearrange the lists from most recently updated mod to more formerly updated mod. The "zero dates" have obviously no meaning by themselves and were added to make the mods with a completely unknown date or with a vague date compatible to sorting adjustments. Also, mobile device users that encounter difficulties in viewing the tables might solve the problem by going to their browser's settings and switching "Mobile view" to "Desktop/PC view". If that doesn't work, they can find a concise list of the mod pages' links in the end of this page, but without any other info that the tables also include. Moreover, for almost all the mods with no page in the wiki and for a few mods with various issues but which were considered worthwhile for a download link to get offered for them, there is also a link leading to the source code of each one. This is a minimal cure for the lack of a wiki page for these mods, as readers who are familiar with java can at least visit their repositories and gather some info by reading the files of the source code. Disclaimer: This list does not contain all of the available mods. Currently 92 mods are listed in the first five tabs (8+16+48+15+6) and 22 in the last table; 115 in total.
