WhatsApp has become the most popular messaging app in the world, but it has also leaped off mobile devices and onto our browsers. Many of us value seeing our messages come onto our computer screens in real-time as we work, and WhatsApp gives us the option to reply more easily and quickly using our computer keyboards. Heres everything you need to know about WhatsApp Web and how to get started using it.Editors note: We used a Google Pixel 7 running Android 14 to develop these steps. We also verified the steps work on Apple devices using an iPhone 12 Mini running iOS 17.2.What is WhatsApp Web, and how does it differ from the desktop app?Edgar Cervantes / Android AuthorityWhatsApp Web is the online browser version of the mobile app. It enables you to receive your messages on your computer screen in real time, reply by typing on your keyboard, start new conversations andgroups, and search chat histories. You can receive message notifications from your browser if you have them enabled in the browser settings.However, unlike desktop and mobile apps, it doesnt allow you to make telephone and video calls. You also cant change your status. So there are a few shortcomings with the browser version but nothing that would be a deal-breaker.What are the differences between WhatsApp Web and the mobile app?Edgar Cervantes / Android AuthorityThe differences between the web version and the mobile app are the same as the desktop app. The mobile app gives you the full WhatsApp experience with all the bells and whistles. The browser version misses things like calling, video calls, and status updates.Setting up the browser version of WhatsApp is very quick and easy. The following steps assume you already have an account on the mobile app. If not, you need to do that first.On your computer, launch your browser and go to web.whatsapp.com.Now, launch WhatsApp on your phone.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on Link a device.Use the phones camera to scan the QR code on the browser.Thats it. After a few seconds, your chats will be accessible through WhatsApp Web.You need to bear in mind a security vulnerability when using the browser version. When you close the browser tab or the browser completely it doesnt log you out of your WhatsApp account. If youre worried about your privacy, its essential to sign out of your WhatsApp account before closing the browser.On your smartphone, launch WhatsApp.On Android, tap on the three-dot menu icon and select Linked devices. On iPhone, tap on the Settings tab and select Linked devices.Tap on the linked computer.Hit Log out.One of the most common complaints people make about WhatsApp is the lack of an iPad version. Until Facebook rectifies that problem, WhatsApp Web is an excellent alternative to use on the tablet. The process is very similar.Open a browser on the iPad and go to web.whatsapp.com.You will see the QR code on the screen.Follow the same smartphone steps mentioned above to connect your iPad to WhatsApp.If youre using the Safari browser, you can even make an icon for the screen by tapping the Share button and choosing Add to Home Screen in the menu.The only downside to using WhatsApp on an iPad is that the notifications are pretty terrible. Youre relying on the browser to deliver the notifications, not WhatsApp. So unless you dont need to reply to messages immediately, you would need to keep the browser open and the iPad window awake to see incoming new messages.FAQsCan you video chat on WhatsApp Web?No, video calls are unavailable on WhatsApp Web.Can you make a phone call on WhatsApp Web?No, like video chatting, audio calls are also unavailable on the browser version of the app.Can I update my status on WhatsApp Web?No, you cant update your status on WhatsApp Web.
