We thought about making this simple and useful post to guide you through the process and enable you to find your phone's position as soon as possible. If you follow the instructions displayed on the tracking interface and provide the right information, everything should go smoothly and you'll get your phone's accurate position. The first step is to access the IMEI tracking interface. For what's coming next you'll need to provide two information, the IMEI code that identifies your cellphone and the country where the device is located. Once you have provided these two information, the system is going to be able to get the phone's status through IMEI and then run trilateration to find its position. Now the question that many people tend to ask is where do I find my phone's IMEI? It's possible to get the IMEI by dialing *#06#. You'll get one or two IMEI codes depending on the device, both can be used to perform a phone tracking. If you're in a position where the phone is not in your possession and you don't know the IMEI, you can check the box that usually comes with the phone when you buy it or contact your phone operator. Phone operators link the subscriber identity module with the international mobile equipment identity, so each phone number within the database refers to one or two unique IMEIs. There are also some platforms on the internet that can generate a device's IMEI only by providing the number. All you have to do is enter some information related to the device: Phone number, country, user... Send a database request to get the imei associated to your phone number. Fill the search boxes with the right information and click on the IMEI track button to start the operational system. You can follow each operation through the coding interface and get notified on the tracking status or if any problem occurs. When the process is over, you'll get your phone's position on a map. Like any other program, bugs and technical difficulties may occur, reload the page and if the problem persists contact us. With Imei-Tracker you can track any mobile device only by entering its IMEI code. We created this platform to help people with finding their mobiles devices. We know that mobiles play important roles in our lives and that losing them can be painful, we experience the same struggle in our lives and couldn't find the appropriate help. The goal is to provide you with a life-saving service for free. We do not intend to put any type of monetization and we are fully aware of our social devotion towards a great cause. This platform respects all the legal dispositions that regulates the telecommunication systems. The user must be aware of his legal position before tracking a mobile device which is not in his possession, otherwise he may face serious legal issues related to privacy. We are constantly looking forward to improving our platform and adding new features to make the user experience more positive. We hope that our system will be of a great benefit, if you have any questions or propositions to make, contact us. IMEI stands for International Mobile Equipment Identity. IMEI is a protective phone system that helps identifying mobile phones and distinguish it from other devices. Each phone is associated with a specific digital code formed by at least 14 characters. Nowadays, many entities resort to the IMEI technology to protect their personal and professional data that is stored within their mobile devices. IMEI has many features that can be activated remotely and block access to the person that holds the phone in their hands. Phone operators can perform along with the basic protective measures such as blocking the phone or cutting its signal transmission, geo-tracking to locate its precise location. It is correct to say some entities have the ability to find your phone by tracking your IMEI. The phone operator where that phone number is registered can add isolate the device by adding it to a black list that create intentional dysfunctions and block the access to critical data. IMEI tracking is one the most important features that can be exploited through equipment identity. It helps you track the location of a phone device just by entering the IMEI that identifies that device. You can exploit this technology to retrieve your phone when it is lost or stolen without involving your phone operator because many platforms offer online IMEI tracking for free. All you have to do is generate the IMEI of the device that you want to track and run IMEI tracking through a specialized platform to find the exact location of your cellphone. Phone finders that rely on IMEI tend to be very effective because they work with a technology that offer a quality tracking. If you're in a situation where your device is lost or stolen, one of the best tools you can use are these that function via IMEI tracking. In addition, by tracking your cellphone with IMEI you avoid many technical complexities that often occur during locating processes. That's due to the fact that you only need to provide the IMEI of your phone to be able to locate its position. Online IMEI tracking In our times, pretty much everything goes through online platforms that provide services that can be granted anywhere at any time. Thanks to automation and the development of modern technologies, it is possible now to track any IMEO online without having to go through any intermediate. Besides, tracking the location of a number provides precise and accurate results; you will have the location of your phone number displayed on a map, where you can navigate to situate yourself properly. Locating a number with IMEI is a powerful tracking alternative that can save your life in delicate situations. All you need to do is enter the IMEI of the device you wish to locate in the appropriate platform and let the system run the adequate process and deliver you the position of your cellphone. You just need internet connection to access the platform, enter your IMEI and get your mobile's real time position within minutes. We know that people need to access the platform anywhere they go because losing a phone can come up in any place. That's it's advisable to note or remember your phone's imei to avoid losing time in critical situation; Any minute that passes without you taking action to recover your mobile enhances the chances of never finding it again. Online IMEI trackers are the most effective tracking tools on the internet; you can access them anywhere you go only by having internet connection. The utility of these platforms appear when people find themselves in delicate position such as robberies or simple phone lost. Going through applications or operators takes too much time, time that you wouldn't lose when it comes to getting back the device that contains all your personal data. How does it work? Phone manufacturers associates each device with a specific code called the IMEI. It'll be associated with the phone during its lifetime, and it is very difficult to change without having access to generic manufacturing codes. That's why phone operators combined this asset with signal transmitters to create a constant link between the phone and the satellites that conduct IMEI tracking. The device is actively sending data packages to the operator through signal center that are linked with the operator's servers and the earth-orbiting satellites. This allows it to exchange the required data for the satellites to perform trilateration and triangulation operations to situate the device on a global map. The whole IMEI tracking process relies on a simple yet very useful equation that everyone knows about. Once your device transmits data such as transmission speed and reception time, the satellite runs the appropriate calculations to generate your phone's position. IMEI hold an important role in identifying devices and ensure the validity of any operation that involves authentication. It also unlocks administrative privileges to control the phone. The International Mobile Equipment Identity acts like an intermediate that grants control authorizations. It doesn't come up with some sort of technical assets that enable multiple features but it is considered an important link in the chain of consecutive operations and that's why it is called IMEI tracking. How to find the IMEI 1- Find the IMEI by Typing the Code in the Phone App This is the simplest thing in the world; you will know what the IMEI of your Android is in a couple of steps. Just do the following: Open your mobile phone application as if you were going to make a call. Type * # 06 #. The mobile will have opened a window with the IMEI number; you just have to write it down. In the case that it is a double SIM, you must write down the two numbers. 2- In Android Settings If the above method does not work for you for any reason, you can also find your IMEI in another way. The IMEI is also noted in the settings of your mobile. You just need to enter "Settings" and go to "About phone." It is usually the last option on the menu. Look for something like "Phone information", then "Phone identity." The names change because each manufacturer customizes Android as they want, but the IMEI always appears in that section. 3- Look For the Mobile Box The manufacturer always puts the IMEI of their smartphones in the box, so you only need to look for it to write down the identifier. It is usually on the back of the packaging or the side. 4- If Your Mobile Has a Back Cover, the IMEI is Under the Battery This is very strange since most current phones are Unibody, so their battery cannot be accessed. Otherwise, you only need to access the inside of your smartphone and write down the IMEI. Some brands include a small label on the SIM socket, where the IMEI is noted. This is not the norm, but it is worth keeping in mind. 5- I No Longer Have My Mobile This is the worst part because it means a high probability that your smartphone has been lost or stolen. Don't despair, maybe you can get it back. For this, it is important to know the IMEI, you can know it even if you do not have the smartphone. Now that everything is connected to the cloud, both on Android and on iPhones and iPads, there is a way to find this code remotely: On Android, you can try heading to the Google Control Page. There is a left column with information on devices linked to the account you signed in with on this page. Click on the device whose IMEI you want to find out (1) at the top of this column, and then click on the information button (2) with the icon to the right of its name. An information window about the device will open. In this window, you will see the IMEI of this mobile even if you do not have it physically with you, it will be enough to log in with your Google account on it. With iOS, the way to proceed is similar. You have to go to iCloud.com and log in with the Apple account you use on the device whose IMEI you want to know. Once inside the iCloud website, click on the Settings button to enter the settings. The first thing you have to do is get your IMEI digits by dialing a special code in your phone *#06#. Phones usually generates three codes; IMEI 1, IMEI 2 and SN. The first and second IMEI refer to the same mobile device, you can neglect the SN as it won't be useful in the upcoming steps. If you don't have the phone between your hands, you can go to your phone operator that will pick it up from their database. It's possible to ask your operator to track your IMEI but the request is usually declined or delayed to administrative protocols. The current laws only allows specific entities to track phone numbers and external system, that's why you will need to open operators avoid offering this service because they'll get overwhelmed by tracking requests. When you got the IMEI in your possession, access the tracking panel and fill in the boxes with information related to your phone. You will need to enter your IMEI and specify the country where the device is located. Once you have specified the essential elements for a tracking process, click on the button and let the system operates. You can follow the advancement of the operational system through a panel that'll keep you informed on the status of each ongoing operation. The finalization of the tracking goes through an identify verification to make sure the user is doing everything by the law and is not compromising the privacy of others. Once completed, the user is automatically redirected to a map that shows the perimeter where the phone might be based on previous calculations. IMEI Tracker Our platform provides an IMEI tracking functionality online. We conceived a simple and easy interface that our users can exploit to track their phones with IMEI. This IMEI tracker has the ability to determine the position of any device that is linked with a mobile equipment identity. The IMEI tracker generates a precise geolocation and automatically displays it on an interactive map. The system goes through many operational processes to complete the tracking properly and ensure the validity of the number and the identity of the demander. IMEI trackers can serve as very important assets in many life areas. We're not only talking about losing a phone or thefts. Many people resort to this technology for parental control and social purposes; you want measure the fidelity and sincerity of a person? Get his phone's IMEI and put on the tracker to know where they go. Such acts have good and bad sides, it can destroy a relation or fortify it and make it stronger, be careful on how you use the IMEI tracker. We reconceived the platform under the request of many users that faced regular problems due to many technical operations. Our system handles now these operations making our operational system fully automatic and do only require from the user to verify his IMEI. Using the IMEI tracker is simple and doesn't require any technical knowledge. The only thing required from the user is to provide a valid IMEI code. After doing so, you need to specify the country where your mobile phone was registered the first time. Mobile operators are the entities that link IMEI to your mobile identity, they hold the legal right to black-list and white-list it under the right circumstances. IMEI tracker provides an accurate check on the status of the phone, whether it is lost or stolen, it generates a full report on the phone the moment the tracking is performed. There are two types of IMEI trackers: Mobile tracking apps available on Google Play Store and online tracking platforms. They both provide good results in terms of geo-positioning your device. However, online platforms can be more suitable than mobile apps in certain conditions. In order to operate with a mobile tracking app, you need to have the app itself installed on your device. It means, that you should have taken measures before being able to track your cellphone. That's exactly why going through an online platform will remain the best option for you. Once you put your hand on your device's IMEI, you can get started with the tracking process. Things go a lot more quickly, and in such situations time is precious. The more time you lose the less are your chances to recover your phone. That said, in terms of accuracy and performance both methods rely on the International Mobile Equipment Identity. The only difference remains in how the processing occurs and how much time it may take to track your mobile phone. Find your phone by IMEI Our platform acts also like a phone finder by exploiting the power of IMEI. In order to do so, you need to get the digits that identifies your phone's mobile equipment identity and go through the process that we have discussed previously. We know that losing a phone nowadays can be a terrible experience because these little machines became associated with our personal lives. They hold our history, mistakes and future projects. It explains the stress that invades us when the phone is not in our possession anymore; if you want to have a good chance finding your phone by IMEI, you'll have to take action and act quickly. The first thing you need to think about is finding a device that has access to internet connection in order to access the IMEI tracking platform. This you'll run the tracking to find your phone, but the situation is not as easy as it seems. The phone may be in movement and the system only shows the position at a precise moment. Keeping the position updated requires a lot of resources from the internal and external system, that's why you will need to open multiple sections or keep restarting the operational system until you find your phone. Be careful in thefts cases, you may need the assistance of law enforcement to recover your stolen phone. Such actions require cooperation with the police to avoid altercations and ensure the smooth recovery of your device. Phone Tracking alternatives If you cannot find your device's IMEI, you can opt for other services that will help you to find your mobile's location. These websites operate differently and do not rely on the international mobile equipment identity to geo-locate your device. The most popular apps use the basic GPS feature available on every mobile device. It allows you to know your device's position through internet. Which means that locating your phone would be impossible without internet access. This is a big inconvenient, if we consider the fact that in the majority of the cases the phone is not connected to internet or even out of battery. The internet connection keeps the data-exchange process alive and tells the app about your updated phone position. We are not saying that these apps are not efficient, but their operating capacity is very limited. You can't rely on these apps in some situations (Example: no battery, no internet connection). The second type of services are more developed and rely on a different technology called the subscriber identity module. The SIM card connects your phone with your mobile operator and enables different features. In fact, phone operators can track your mobile using the SIM card. That is exactly how phone-tracking websites operate. This technology is far more efficient and provides a better geo-positioning. In order to use it, you need to provide the number connected to your mobile. It's possible track a phone using the number by simply entering it on the website. The tracking process will start and you will get your mobile GPS coordinates displayed on google maps. "How can I find my device with an IMEI tracker app?" Recently, I encountered a theft incident in my brother's society. iPhone and smartphones were stolen from their rooms, and they still didn't get them back as their phones had become untraceable. Does IMEI number tracking work? Have you faced a similar situation like this in your life ever? Are you concerned about the safety of your mobile phones? Want to track your phone if it goes missing? If yes, then you must read the article and learn how to track a phone using imei online and protect it from being used by strangers illegally. The process of tracking your missing phone using IMEI for free is extremely simple. So let us take a look at this article to know more. If you are not aware of the IMEI number, then, let me introduce it to you. When you buy a mobile phone, its IMEI tracker number will be found behind the battery. It is important and good practice to make a note of it as it will come in handy in case your phone ever gets lost or stolen. IMEI stands for International Mobile Equipment Identity is a unique number provided for every mobile phone and can never be changed, unlike the SIM number. In general, the SIM number is used to identify the particular subscriber account while the IMEI tracking number does the work of identifying the device. When your phone gets stolen, you should immediately contact your service provider and ask them to block your IMEI tracking number. The number will access the GSM network to track the stolen phone and block it from accessing any other network in a particular country. Isn't it amazing to know that your IMEI tracker number can do wonders in keeping your data safe when your phone goes missing? If you find it a bit troublesome to find the IMEI tracking number on the battery. There are also other simple ways to do it: Method 1: Dial a simple code *#06# Open your phone app and type in *#06# and hit the call button. Then your IMEI tracking number will appear on the screen. You can jot it down or take a screenshot to keep it handy. Method 2: Peek into your device settings For Android: Open the Settings app, and go to "About phone". Sometimes, it might be under "System" or "General Management". You'll see "IMEI 1" and "IMEI 2" (for dual-SIM devices) listed there. For iOS (iPhone, iPad): Open the Settings app, Tap General > About, and you'll see a list of info about your device. Just scroll down until you spot the "IMEI" entry. If you know the respective IMEI number of the stolen device, you can track the phone using IMEI for free using various applications that are available online for this purpose. Below are the steps for both Android and iOS device users: For Android Users Step 1: Search for "IMEI tracker" in your Play Store app and download "IMEI tracker-Find my device" on any of the smartphones. Step 2: Click on the "Install" button and start downloading the application. Step 3: After granting permission for access to the application, you will be asked to enter the phone numbers of trusted members and they might be from your family or friend circle. If your phone is stolen or missing and a new SIM is inserted in your phone then, SMS notifications will be sent automatically to those trusted numbers that include IMEI tracking number and Phone location. Step 4: The exact location of the phone will be indicated on the screen. With the help of this IMEI number, you can now track the phone's location easily. Step 5: You can also send "SMS" or command, "get the lost phone" from any other device to the device that is lost and this app will acknowledge it and send the particular location as a reply. For iOS users: There is no direct IMEI tracking app for iOS due to Apple's strict privacy policies. However, you can use the "Find My" app, which uses the Apple ID instead of the IMEI number. Find My (iOS): On the device you want to track, go to Settings > [your name] > Find My > Find My [device]. Make sure "Find My [device]" and "Share My Location" are toggled on. On your own iOS device, open the "Find My" app and sign in with your Apple ID. Tap the "Devices" tab at the bottom of the screen. Select the device you want to track from the list. The app will display the device's location on a map, and you can track it in real-time. Here are more articles about the same topic: 5 Methods to Track a Lost Phone How to Track an Android Phone for Free 2023? Top 10 best SMS Trackers for Android and iPhone in certain conditions, using an online platform is more suitable than a mobile app. For your convenience, we recommend two tools to track a phone using IMEI online free of cost. Method 1: By using an online IMEI Tracker Using the online IMEI tracker is simple, the first thing you need to do is to provide a valid IMEI code. Then you need to specify the country where your cell phone was registered the first time. After doing so, you can see the status of the phone and check whether it is lost or stolen. Method 2: Block and find your lost phone on CEIR Central Equipment Identity Registry (CEIR) is a government portal launched by the government of India. With the help of this tool, you can remotely block your phone and find your lost phone. Here is what you can do: Step1: Head over to the official website of CEIR Step 2: After tapping on the lock Stolen/Lost Mobile option, you need to enter the information related to the target phone, such as device information, lost information, and personal information. Then you will get the Request ID number. Step 3: Use the Request ID number to unlock an IMEI number. After that, you will see the current status of your lost phone. After you submit your request, the network operators will blacklist the particular IMEI number so that your phone won't be misused. Additional Tip: Contacting the Service Provider You can also try contacting the service provider, which can be a reliable and secure way to track a phone using the IMEI number, particularly in cases of lost or stolen devices. Here are the steps you can follow: Obtain the IMEI number: As mentioned earlier, ask the phone owner for the IMEI number or find it by dialing *#06# on the phone. Contact the service provider: Call the phone owner's service provider and provide them with the IMEI number. They may be able to help you track the phone's location. Provide additional information: The service provider may ask for additional information to verify your identity and the phone owner's consent. Receive the phone's location: If the service provider agrees to help, they will provide you with the phone's location. (Except for the IMEI tracker, you can also check other methods in our previous guide to track a cell phone by number.) Cell phone tracking apps are available for phone tracking purposes and have a wide range of features that cover tracking alert services, keeping a record of online activities, etc. Usually, cell phone tracking apps are network-based, handset-based, and SIM-based. They operate over Wi-Fi and hot-spot networks also. Mobile phone tracking apps help in monitoring and tracking the location and position of destination mobile phones using radio signals via GPS access. When these types of apps are installed on your destination mobile phone, they keep you up-to-date about the current position of the respective phone. FamiSafe is recognized as one of the best phone tracking apps and is highly recommended for its ease of use and best features. It acts as the best cell phone monitoring application for parents who wish to control and track the online/offline activities of their kids. And only \$9.9 a month for multi-monitoring. This parental control software is now available for both iOS devices and Android phones. It has gained incredible success from its valuable customers, according to the latest survey. FamiSafe helps you to check not only the cell phone log details from the destination phone but also assists you while browsing the history of recently surfed web pages and websites. You can also track real-time GPS location from the target device. Web Filter & SafeSearch Screen Time Limit & Schedule Location Tracking & Driving Report App Blocker & App Activity Tracker YouTube History Monitor & Video Blocker Social Media Texts & Porn Images Alerts Works on Mac, Windows, Android, iOS, Kindle Fire, Chromebook What FamiSafe can help? 1. GPS Tracker Keeps track of the target phone and in case the device gets lost, it will automatically delete all data and lock the device preventing it from further unauthorized access. 2. App Blocker Acts as an effective application blocker that will keep your phones away from threats and malware. 3. Content Filtering Easy to block harmful content such as gambling websites or porn. 4. Screen Time Tracking Set screen time limits and make sure their phone can not be used during study or sleep time or in specific places such as schools and bedrooms. 5. Explicit Content Detection FamiSafe can detect all the explicit content sent and received through the main social media apps. This feature will send you offensive content, such as cyberbullying, porn, suicide, or depression. The best part about the feature is that you can add offensive words on your own. You can even use FamiSafe to track your phone for free if lost. Just follow these simple steps and easily locate your cell phone. Step 1: Install FamiSafe on Both the Parent and Kid's phones. Step 2: Register a FamiSafe account inside the App. You may register on either your phone or your kid's phone. The same account applies to both devices. Step 3: Make some settings on both kids' and parents' phones. Step 4: In the main interface of the FamiSafe app, tap "Live Location" to enter the feature. You can start your tracking now! You can sync all the required information from the device and keep it safe for reference. Once the FamiSafe account is created, you need not install the FamiSafe application all the time. You can log in from the browser or other devices when it is needed. Web Filter & SafeSearch Screen Time Limit & Schedule Location Tracking & Driving Report App Blocker & App Activity Tracker YouTube History Monitor & Video Blocker Social Media Texts & Porn Images Alerts Works on Mac, Windows, Android, iOS, Kindle Fire, Chromebook In today's world, your phone has become an integral part of life. All the tasks somehow depend on it. Missing, losing, or misplacing the phone can become the most dreadful thing, so just follow the guided methods above. I am sure you now know well how to track your phone using IMEI for free as well as using cell phone tracking apps like FamiSafe.
