We have different solutions for you who do not imply the purchase (or rent) of an expensive copy of Photoshop. A PHOTOSHOP DOCUMENT file (PSD) is a fully editable file format that saves the exact status of a documentâ € text, shapes, layers, masks, effects and everything. While a standard image file is generally small enough, it contains a flat image, and it is single layers, a photoshop document can be quite large, it contains a lot of information, and is usually multi-layer. Most of the time, people will use the PSD format while working on a file and then export it to another type of image file for sharing. We are going to take a look at three possible solutions for how you can use a PSD file without having Photoshop â € all of them free. However, if you regularly get PSD files to work on, or if you have a group you need to work for a short time, you might want to consider a short-term subscription to Photoshop, which you can get up to \$ 10 to month. Having said that, let's take a look at how you can work with these files without having Photoshop. IrfanView: To view and convert PSD files (Windows only) Irfan The view is first of all an image viewer, and is a big one. Fast, light, and can only open about every image format in existence many audio and video formats). And above all, it's free. Once you have downloaded and installed GIMP, run it. Open the "File" menu and then click the "Open" command Find the PSD file you want to work with and then click the "Open" button Now that you have opened your file, you can start touching, editing and creating more layers within GIMP. It's not the same thing as Photoshop, but it's the closest thing you can get from free software. So, if you are trying to convert this PSD file to something else, such as a JPG, PNG or GIF file, open the "File" menu again and click the "Export As" command.In the Export Image window, open the "Select File Type" section and choose the file type you want .
