

I'm not robot

Hi @Ezzyne, Installing drivers for your LaserJet 1200 printer on Windows 11 ===== To fix the issue of installing drivers, first install the LaserJet USB (DOT4) communication driver and then the UPD PCL 6 driver by selecting Plug & Play. Once both installations are complete, plug in the USB and you should be able to use your printer. Alternatively, since the HP smart app is not available for your printer model, you can install the printer with Windows built-in drivers. Refer to this document to help you install the printer and let me know if that resolves the issue. If you feel this reply was helpful, click "Yes" to mark it as an Accepted Solution

Hp laserjet 1200 series printer driver for windows 10. Hp laserjet 1200 series driver install. Драйвера на принтер hp laserjet 1200 series для windows 10. Hp laserjet 1200 series driver download.
