"The watch industry is very focused on precious metals and status, and we saw with this metal we could use the symbolic value of a watch for something bigger," says Ludvig Scheja, cofounder and creative director of Triwa. The material is made by an international nonprofit called IM Swedish Development Partner, which collects government-confiscated guns, melts them down, and smelts them into steel bars. While in the past the remnants of old guns might have been sold as low-value scrap metal, or even dumped in the ocean as waste, two Swedish creative agencies suggested that IM should rebrand the material to give it new value. Thus, we now have Humanium. The sales of the material help victims of gun violence and fund development in the countries where the guns were collected. Triwa began working with IM two and a half years ago and worked through the challenges of using a novel material. In its initial state, it isn't pure enough to sit next to the skin, so the company developed a new process that turns the material into a powder and refines it into high-quality stainless steel before forming it into a case for the watch. "It's a completely new way of making watches," Scheja says. (The strap is made from either leather or recycled plastic bottles.) [Photo: courtesy IM Swedish Development Partner and Triwa] The new process makes the material more expensive than alternatives, but the company is interested in using it in other products in the future. IM is also working with four other companies that plan to make products from the material. Triwa hopes that other brands are inspired to follow, such as automakers, though it believes that the visibility of watches makes the product a good fit. "It has strong symbolism," says Scheja. The Humanium project is in the early stages, having transformed a few thousand guns so far out of hundreds of millions of illegal weapons that exist worldwide. But it hopes to bring more awareness to the fact that around half a million people are killed by guns each year. Triwa's first production run uses guns from El Salvador, a country with one of the highest homicide rates in the world, where firearms account for the majority of violent deaths. The watch is currently raising funds on Kickstarter, with prices starting at \$229 for early backers. Of all the travel destinations that are uniquely American, perhaps none are more cherished than the system of national parks. From Assateague National Seashore in Maryland, where wild horses roam the beaches, to Alaska's Glacier National Park, Americans can be assured that some of the nation's most compelling landscapes and important historical sites are preserved for perpetuity. Yet it's precisely because the parks are so American that they are also frequently

the sites of conflict and controversy. In recent years, passionate debates have arisen between advocates and opponents of the nation's western parks, off-road vehicle access, and -just this week- the right to pack a gun while on a national parks vacation. This latest debate, which has stirred the ire of gun-rights activists, has gone beyond petty bickering and has been keeping Congress busy as they consider an NRA-lobbied bill which would ease the ban on loaded weapons within some of the 58 national parks and 333 other sites managed by the U.S. National Park Service. [The] proposed rule change... would allow visitors with concealed weapons permits to carry their firearms in national parks, as long as doing so also would be legal under state law. Rifles and shotguns and "open carry" of loaded handguns would remain illegal in the parks. Are you a national parks aficionado? What's your stance on the guns-in-parks debate? Share your thoughts below! What did you think of this story? Play All ©HowStuffWorks Guns come in all shapes and sizes. Let's take a quick look at some of the most popular types of firearms. Flintlock guns were extremely important weapons in the American Revolution; they also formed the foundation of all modern guns. ©HowStuffWorks Flintlock and percussion cap guns are some of the earliest types of trigger-activated guns. Colonial America depended on these weapons for food, protection and warfare. ©iStockphoto.com/Wojtek Wojtowicz Dueling was practiced in America all the way through the 18th century. These dueling pistols would have been the weapon of choice. The American military relied on a larger version of these pistols. © iStockphoto.com/Kate McKenna The musket was a soldier's best friend during the American Civil War. They were loaded through the muzzle and were fired with percussion caps. Muskets became obsolete with the invention of cartridge ammunition. © HowStuffWorks Revolvers are one of the most popular gun designs of all time. Their reliability and simplicity make them a popular choice for hunting and self-defense. ©iStockphoto.com/Christian Carroll Revolvers, such as this one, played a very important role in the history of the American West. Cowboys, lawmen and outlaws all relied heavily on the revolver. © iStockphoto.com/Julie Fisher This Colt .44 Anaconda is an example of a modern revolver. The basic design hasn't changed in more than a century. ©iStockphoto.com/Gregor Inkret A typical revolver cylinder can hold up to six or seven rounds. The cylinder rotates the round into firing position every time a person pulls the trigger. ©iStockphoto.com/Gregor Inkret Here's an example of a Smith & Wesson Magnum revolver. Magnum rounds are slightly longer than standard revolver ammo, giving them greater firepower. Revolvers aren't the only type of handgun, however. ©iStockphoto.com The semiautomatic pistol is one of the best-selling types of handgun in the United States. It often has a higher ammo capacity than a revolver. ©iStockphoto.com Instead of a cylinder, semiautomatics rely on a clip to load the ammo into the firing chamber. The handle of the gun houses the clip. © iStockphoto.com/Marje Cannon A Beretta Model 96 .40 caliber compact pistol is another example of a semiautomatic handgun. The semiautomatic has replaced the revolver as the standard sidearm for American police forces. © iStockphoto.com/Sean Galloway The Glock 17 is one of the most well-known handguns. Glock's are known for their reliability and safety features. © iStockphoto.com/Jan Dabrowski American police forces have adopted the Glock as their standard issue weapon. Silencer/Getty Images A gun silencer screws on to the end of the barrel, giving the pressurized gas behind the bullet a big space to expand into. When the bullet finally exits through the hole in the silencer, the pressure being uncorked is much, much lower, so the sound of the gun firing is much softer. Courtesy SwissMiniGun According to Guinness World Records, the title of the smallest working revolver in the world goes to the Miniature Revolver C1ST, manufactured by SwissMiniGun. The tiny firearm measures just more than 2 inches (5 centimeters) and weighs less than 1 ounce. Next, we'll take a look at some other types of firearms. The modern flamethrower came about in the early 20th century, but the original idea is actually thousands of years old. Finally, we'll take a look at the most famous type of machine gun in the world on the next page. ©iStockphoto.com/Gregor Inkret The Russian AK-47 is the most famous machine gun in the world. It was developed in the mid-1940s and is still used by armed forces around the globe. For more information on firearms, check out the 5 Most Popular Guns. Lay one 3" down and connect a 90 to it. On the other part of the 90, connect a 3". Put a T on it, on both sides of the T, put a 3". Put a 90 where shown, and onthe other 3", put a T. On the 90, put a 3" then a cap. On the bottom of the T, put a 3", then a cap. Also on the T, put the 7" on. You know what's missing from most London pubs? A ruddy great tree in the middle of the room. I mean, it's the perfect antidote to a guilty day lost indoors to the boozing. And that certainly feels like what The Gun wants from you. It's a multi-purpose Spitalfields pub trying to be all things to all people and at all times of the day. Aside from that tree, there's a dining area with table service shielded away at the back and filled with fringed soft furnishings, while the main room plays host to sports-watchers as easily as it does to partygoers. The only sign of a DJ booth above the bar is a neon one, stating: 'keep it real', which feels surprisingly uncool for a pub from the team behind The Ten Bells, a place around the corner that seems to have understood the area well throughout its recent years of service. What seems to come more naturally is keeping east Londoners lubricated. The drink menu is expansive and the wine list is actually decent - they even recommend drinking one of the reds at an on-trend 'chilled' temperature. It's no secret that Heineken have invested heavily in the pub, and so the draught range is dominated by beers in their family. While Beavertown and Brixton Brewery now technically fall into that camp, fans of London's craft beer scene may be barking up the wrong tree by paying The Gun a visit.
